

Driver Training Resources

The Stoneridge Fleet Solutions Team has created a series of training resources for MirrorEye-equipped drivers and fleets. You can easily access MirrorEye Training Portal on your tablet or phone to view short training videos - from system cleaning to adjusting user settings.

You are on your way to having improved safety and better driver vision, including the elimination of blind spots, advanced trailer panning, and more.

Stoneridge MirrorEye® CMS is the first FMCSA exempted* driver vision system that replaces a truck's mirrors with integrated external digital cameras and digital monitors inside the cab of the truck.

SELECTING END OF TRAILER

- 1 Prior to resetting the distance lines you must place a cone or reference marker at the end of trailer.
- 2 Use the Control Knob to enter the Driver's menu and select "Distance lines" ---> "Set end of trailer".
- 3 Use the control knob and monitor to align the "red line" with the cone/reference marker at the end of the trailer. Reminder that the End of the Trailer is where the trailer meets the ground and not the corner visible in the horizon. If a cone is used, adjust to the bottom of the cone, ground plane.
- 4 Once set, push the Control Knob to select the location.
- 5 The Reference Distance Lines will then automatically populate on both monitors.
- 6 Readjust Reference Distance Lines if switching trailer's length.
